PREPARATION FOR THE PgMP® EXAM

PGM00.99

The days of the monolithic, complex, multi-year project are over. They are just too hard to plan, manage and complete within expectations. Instead large initiatives are managed through a program. A program is an organizational structure to coordinate and guide a large initiative made up of multiple related projects.

The Project Management Institute (PMI) has developed a certification for program managers called the Program Manager Professional (PgMP®). This class prepares students to take the exam through a series of instructor lead discussions, key definitions, test tips and sample test questions.

PREREQUISITES

- Program management experience

LEARNING OBJECTIVES

At the end of this class, participants should be able to:

- Better understand the fundamentals of program management
- Pass the PgMP® exam

WHO SHOULD ATTEND

- Individuals interested in passing the PgMP® exam
